C8 ENERGY

SKELSTART

THE MOST POWERFUL STARTING MODULE FOR ENGINES UP TO 27L

- JUMP START AVOIDANCE
- ISOLATES THE STARTER FROM THE BATTERY BANK – 3 POLES
- WORKS AT –40^C/^F
- HIGH POWER– 2130 CCA
- NO NEED TO IDLE ENGINE TO RECHARGE
- 12V: OPERATING RANGE: 9V TO 16V
- 24V: OPERATING RANGE: 18V TO 32V
- 8,5 KG / 18 LBS
- 2X INCREASE BATTERY BANK UP TO 2X
- EXTEND STARTER LIFE
- 1 MILLION CYCLES – ONE-TIME INVESTMENT
- SAME SIZE AS GROUP 31 – A DIRECT REPLACEMENT
- FULL CHARGE IN 10/20 MIN (24/12V)
- ONLY 9V NEEDED TO RECHARGE

SKELSTART

THE MOST POWERFUL STARTING MODULE FOR ENGINES UP TO 27L

What is SkelStart?

SkelStart is a supercapacitor engine start module. This storage technology is similar to batteries, but its strengths are very high power to crank your engine, 15+ year lifespan, and excellent reliability, even in extreme temperatures.

Easy and safe installation:

The SkelStart module goes between your battery and starter, making it the sole starting power for your engine. The batteries will keep powering hotel loads (lights, A/C, and so on). Depending on your needs, the SkelStart can either replace one of your batteries, or be installed alongside your existing batteries.

Sustainability:

SkelStart is manufactured by Skeleton Technologies. This company's innovative technology and their committed actions in the sprint to net zero listed them in the Global Cleantech 100 hall of fame list. Their exceptional engineering management systems as well as environmental policies and processes earned them ISO 9001:2015 and ISO 14001:2015 certifications.
